SUMMARY

AI Software Engineer with a robotics engineering background and hands-on experience building end-to-end AI applications powered by machine learning, LLMs, and MLOps. Experienced developing production-oriented ML systems, integrating natural language interfaces, automating model evaluation workflows, and collaborating across technical disciplines to deliver user-focused solutions. Passionate about rapidly prototyping AI features, improving system reliability, and building intelligent products that create measurable impact.

EDUCATION

TripleTen | AI/ML | 08/25 - 08/26

- Completed 15+ hands-on AI/ML projects covering machine learning, deep learning, MLOps, LLM integration, model deployment, SQL, and Python.
- Built production-style applications using MLflow, DVC, GitHub Actions, Pytest, and Evidently.

Grand Canyon University | B.Sc., Engineering with an Emphasis Robotics (Minor: Cybersecurity)

AI ENGINEERING PROJECTS

LLM-Powered Olympic Medal Prediction System | [GitHub](#) | 07/26

Python • scikit-learn • MLflow • FastAPI • LLM • AWS • Git

- Designed and deployed an end-to-end AI application that predicts Olympic medal outcomes from 270K+ athlete records using machine learning and a natural-language LLM interface.
- Integrated a large language model to translate natural language questions into model predictions and conversational explanations.
- Developed and evaluated multiple classification models using MLflow, selecting the highest-performing model based on precision, recall, and F1 score.
- Designed reusable preprocessing and inference pipelines to improve deployment consistency and model reliability.
- Automated testing, validation, and configuration management using Git-based workflows and MLOps best practices.

Student Dropout Prediction MLOps Pipeline | [GitHub](#) | 07/26

Python • MLflow • DVC • GitHub Actions • Evidently • Pytest

- Built an automated ML pipeline for preprocessing, training, evaluation, and model validation.
- Implemented experiment tracking with MLflow to compare model iterations, evaluate performance, and improve reproducibility.
- Developed CI/CD workflows using GitHub Actions and Pytest to automate testing and model verification.
- Created feature-drift monitoring with Evidently to identify model degradation and recommend retraining strategies.

SKILLS

Languages

Python • SQL • JavaScript • HTML • CSS

AI / Machine Learning

TensorFlow • PyTorch • scikit-learn • NLTK • LLM Integration • Prompt Engineering • Feature Engineering

MLOps

MLflow • DVC • GitHub Actions • Pytest • Evidently • CI/CD

Cloud & Backend

AWS • REST APIs • Git • GitHub

Data

Pandas • NumPy • Matplotlib • Plotly • Tableau

Engineering

Computer Vision • Embedded Systems • Robotics • Control Algorithms

EXPERIENCE

Western States Fire Protection | Project Manager / Designer | 06/23 - 07/26 | Phoenix, AZ

- Led engineering projects from design through delivery, coordinating cross-functional stakeholders to meet schedule, quality, and compliance objectives.
- Developed detailed CAD system designs and maintained highly accurate engineering documentation for commercial construction projects.
- Identified workflow bottlenecks and improved communication between engineering, field operations, and project stakeholders.
- Balanced multiple concurrent projects while managing priorities, deadlines, and technical changes.

Grand Canyon University | Project Manager | 08/20 - 04/23 | Phoenix, AZ

- Led teams of student employees while coordinating daily operations and project execution.
- Improved operational efficiency by organizing large volumes of documentation and streamlining internal workflows.
- Managed logistics for university-wide enrollment events requiring cross-functional communication and attention to detail.
- Demonstrated leadership, ownership, and accountability in fast-paced operational environments.
